

Description of Map Units

QUATERNARY SYSTEM

HOLOCENE

- Ha** **Holocene undifferentiated alluvium**—undifferentiated deposits of small upland streams; alluvial deposits of minor streams and creeks, of varying textures, filling valleys incised into older deposits.
- Hs** **Small river deposits, undifferentiated**—undifferentiated alluvial deposits consisting of natural levees, oxbanks, and abandoned channel sediments within the river valley.

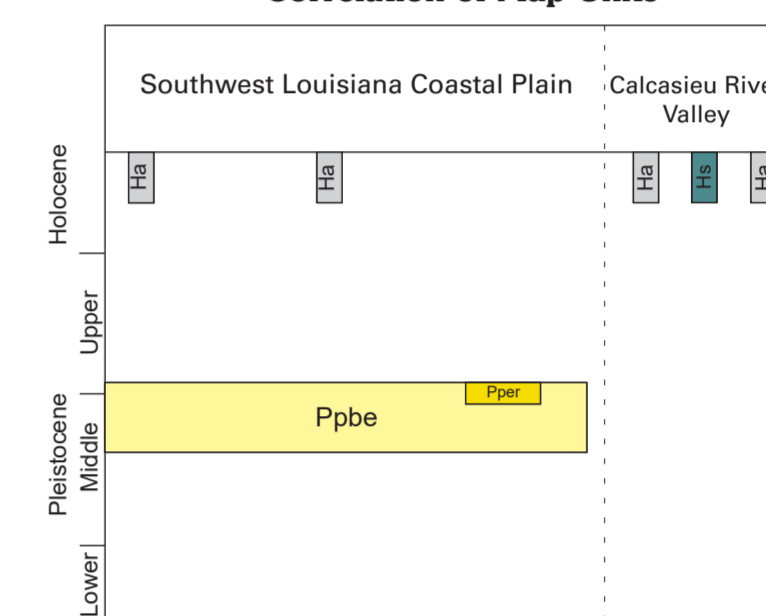

PLEISTOCENE

PRAIRIE ALLOGROUP

- Ppbe** **Beaumont Alloformation**—coastal-plain deposits of late to middle Pleistocene streams, forming the oldest and topographically highest of the Prairie surfaces of southwestern Louisiana. The surface exhibits relict channels of the Red and Calcasieu River, and in adjoining quadrangles to the north the unit includes deposits of the Englefield barrier trend (Houston Ridge).
- Pper** **Relict Pleistocene barrier ridge**—alluvial remnants delineated on portions of the Beaumont Alloformation.

- Open Water, Inundated Area, Wetland**
- Contact**—includes inferred contacts.
- Normal fault**—Identity and existence certain, location accurate. Ball and bar on downthrown block.
- Concealed fault**—Identity and existence certain, location concealed. Ball and bar on downthrown block.
- Streams**
- Topographic Contours**
